# **USDA-NRCS P Management Strategies**

- **Soil test P for agronomic use: P requirements of the crop**
- **P threshold approach: establish critical soil test P levels**
- **P risk index approach: integrates P source and transport characteristics of a field**

# What is a P Risk Index?

- **The Phosphorus Risk Index is a field based planning tool that integrates soil properties, hydrology and agricultural management practices to assess the risk of P movement from soil to water**

# Factors in P Risk Index

## Transport

- Rainfall data
- Surface runoff class
- Erosion potential
- Proximity to stream channel
- Soil texture and permeability

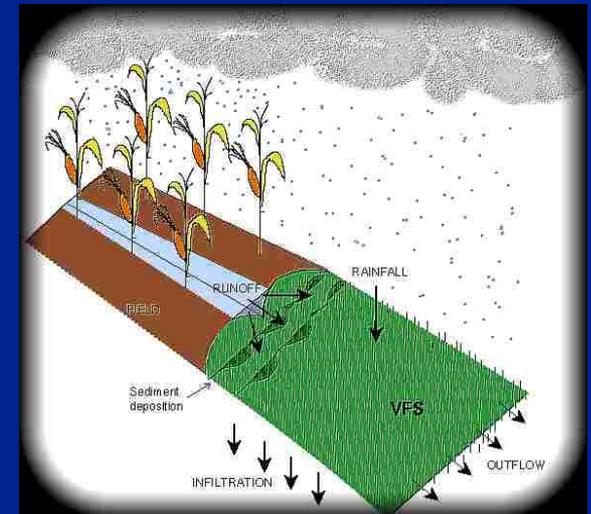

# Factors in P Risk Index

## Source

- Soil P content
- Fertilizer P rate
- Manure P rate

## Site Management

- Application method
- Application timing
- BMPs

# Assessing Site Vulnerability to P Loss

High soil P,  
no runoff

High soil P  
and runoff

Surface runoff,  
low soil P

**Saturated areas where surface runoff can occur**

# Original P Index (Lemunyon and Gilbert, 1993)

## Source Factors

	<b>None (0)</b>	<b>Low (1)</b>	<b>Med. (2)</b>	<b>High (4)</b>	<b>V. High (8)</b>
<b>STP (1.0)</b>	<b>N/A</b>	<b>Low</b>	<b>Medium</b>	<b>Optimum</b>	<b>Excessive</b>
<b>Inorg. P Rate (0.75)</b>	<b>None</b>	<b>&lt;15</b>	<b>16-40</b>	<b>41-65</b>	<b>&gt;65</b>
<b>Inorg. P Method (0.5)</b>	<b>None</b>	<b>&gt;2 inches</b>	<b>Incorp.</b>	<b>Incorp &gt;3 Mo.</b>	<b>Surface</b>
<b>Org. P Rate (1.0)</b>	<b>None</b>	<b>&lt;15</b>	<b>16-40</b>	<b>41-64</b>	<b>&gt;65</b>
<b>Org. P method (0.5)</b>	<b>None</b>	<b>&gt;2 inches</b>	<b>Incorp</b>	<b>Incorp &gt;3 mo.</b>	<b>Surface</b>

# Original P Index (Lemunyon and Gilbert, 1993)

## Transport Factors

	<b>None (0)</b>	<b>Low (1)</b>	<b>Medium (2)</b>	<b>High (4)</b>	<b>V. High (8)</b>
<b>Soil Erosion (1.5)</b>	<b>N/A</b>	<b>&lt;5 t/a</b>	<b>5-10 t/a</b>	<b>10-15 t/a</b>	<b>&gt;15 t/a</b>
<b>Irrigation Erosion (1.5)</b>	<b>N/A</b>	<b>Infreq. Well drain</b>	<b>Mod. Irri. Slope&lt;5%</b>	<b>Freq. Irri. 2- 5% slope</b>	<b>&gt;Freq. Irri. &gt;5% slope</b>
<b>Runoff Class (0.5)</b>	<b>N/A</b>	<b>V. Low or Low</b>	<b>Medium</b>	<b>High</b>	<b>Excessiv</b>
<b>Dist. To Water (1.0)</b>	<b>&gt;1000 ft</b>	<b>1000-500</b>	<b>500-200</b>	<b>200-30</b>	<b>&lt;30</b>

# Interpretation of the P Risk Index

<b>P Risk Index</b>	<b>General Vulnerability to P Loss</b>
<b>&lt;8</b>	<b>Low potential for P loss</b>
<b>8 - 14</b>	<b>Medium potential for P loss</b>
<b>15 – 32</b>	<b>High potential for P loss</b>
<b>&gt;32</b>	<b>Very High potential and adverse impact on waters</b>

# Summary of P Loss Indexes in SR

- Additive vs. multiplicative
- Surface drainage vs. leaching
- All farm fields vs. pasture
- Water body P sensitivity
- Credits for BMPs
- Screening tool, e.g., soil test P
- Weight of each factors
- Different index values

# Summary of P Loss Index in SR

State	Index Started	Index Value	STP Limit	Validation
Alabama	2001	0-96	No	No
Arkansas	2002	0-1.8/0-100	No	Yes
Florida	2000	0-225	No	Underway
Georgia	2002	0-100	No	No
Kentucky	2001	0-112	400/PI	Yes
Louisiana		0-1800		

# Summary of P Loss Index in SR

State	Index Started	Index Value	STP Limit	Validation
MS		0-22	?	
NM	2001	0-47	No	No
NC	2003	0-100	No	Some
OK	1998	Qualitative	300/400	No
SC	2002	0-25	No	No
TN	2003	0-301	No	No
TX	2000	0-32E/0-35W	?	Yes

# Summary of P Loss Index in SR

- Majority like initial version
- Arkansas – empirical relationships based on field studies
- NC – quantitative using hydrologic models

# Use of P Loss Indexes

Rating	Management
Low	N based management
Medium	N based management with BMPs
High	P applications to crop removal
Very High	No P fertilizer or manure application, remediation required

# Revised AR P Index for Pasture

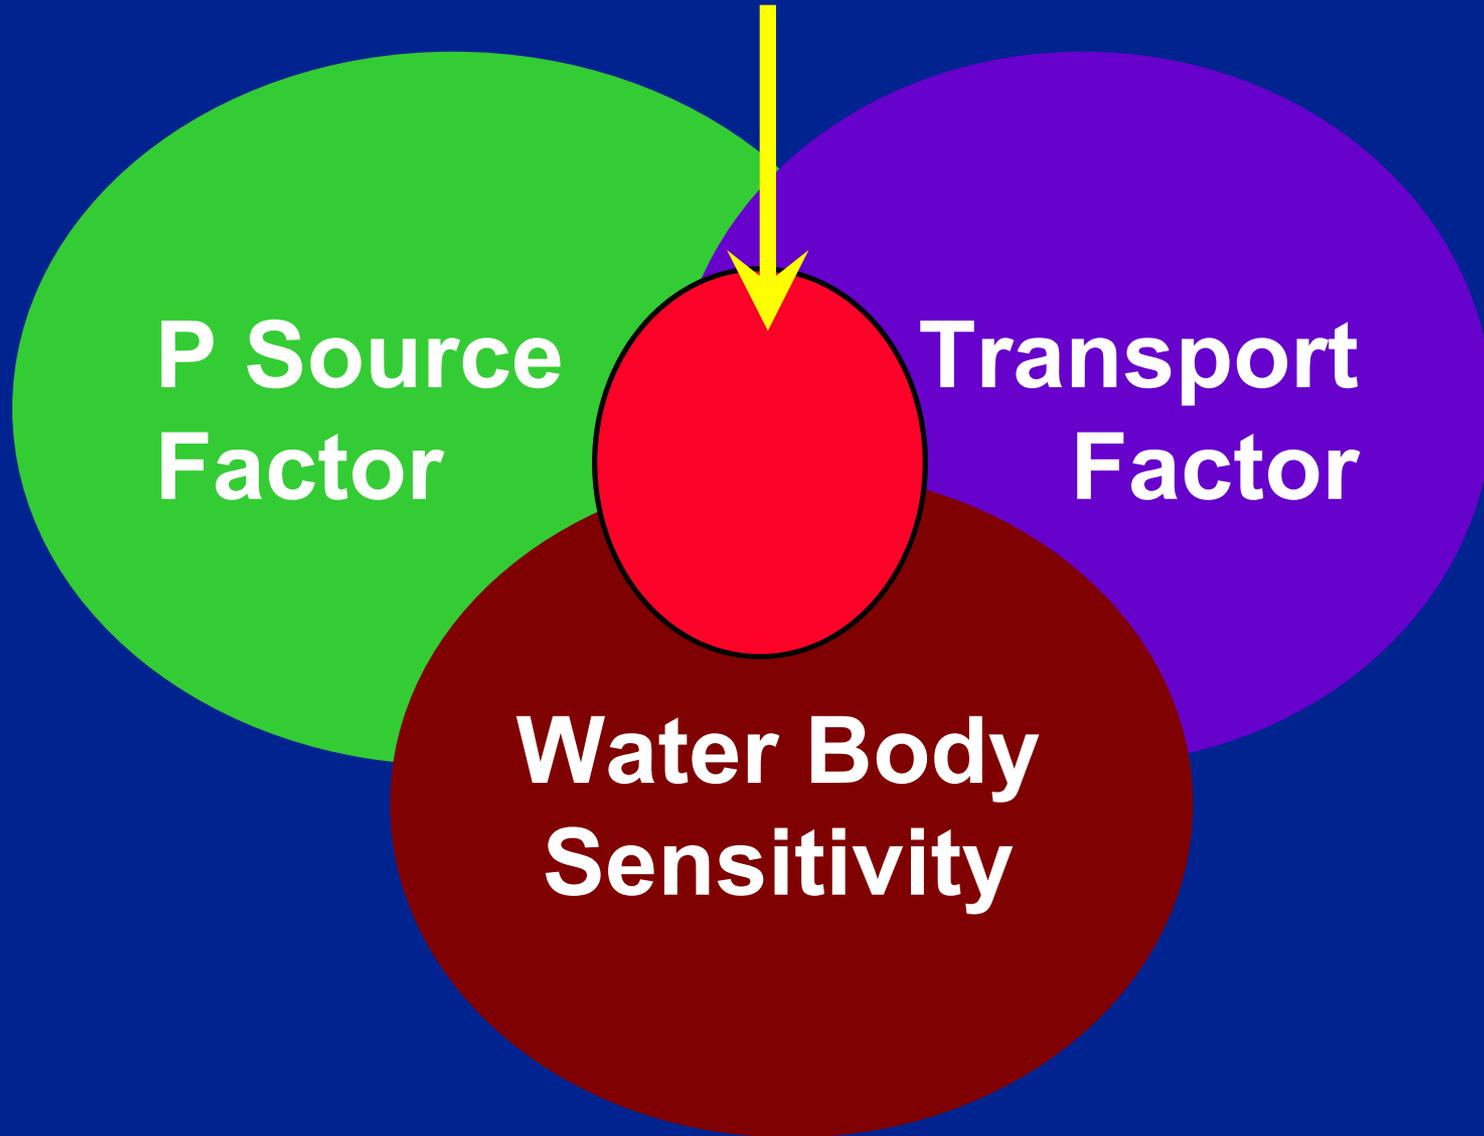

**PI Value = (P Source) x (P Transport) x (BMPs)**

**P Source = (0.4 \* lb/ac soluble manure P) + (0.0007 \* lb/ac soil test P) + Particulate P (RUSLE2)**

**P Transport = Erosion + runoff class + flooding frequ. + appl. method + appl. timing + grazing manage.**

**P Index with BMPS = P Index \* 0.9 for each BMP**

# P Risk Factors

**P Source  
Factor**

**Transport  
Factor**

**Water Body  
Sensitivity**

# Discussion

- Should the values be standardized?
- Should the index be linked to waterbody sensitivity?
- Should the index be validated?
- How to evaluate the effectiveness of P Index approach?
- Should the index be quantitative?
